Using Gen AI to Create Code

Crafting a Detailed Prompt

Prompt Text

Can you give me Python code that will:

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**
- The Date column should be formatted as **mm/dd/year**

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**
- The Date column should be formatted as **mm/dd/year**
- The **Cost** and **Normalized_Cost** columns should be formatted as **Int32**

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**
- The Date column should be formatted as **mm/dd/year**
- The **Cost** and **Normalized_Cost** columns should be formatted as **Int32**

Then could you give me code that creates a new dataframe by filtering for rows where:

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**
- The Date column should be formatted as **mm/dd/year**
- The **Cost** and **Normalized_Cost** columns should be formatted as **Int32**

Then could you give me code that creates a new dataframe by filtering for rows where:

- **Normalized_Cost** is greater than 500

Prompt Text

Can you give me Python code that will:

- Read a CSV file containing columns named **Date**, **Event_Description**, **Primary_Outcome**, **Cost**, and **Normalized_Cost**
- The Date column should be formatted as **mm/dd/year**
- The **Cost** and **Normalized_Cost** columns should be formatted as **Int32**

Then could you give me code that creates a new dataframe by filtering for rows where:

- **Normalized_Cost** is greater than 500
- **Primary_Outcome** is equal to Yes
