Image Analysis

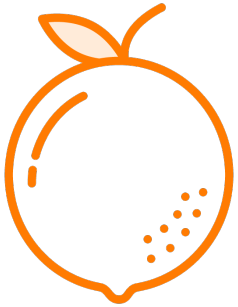
Large set of native capabilities

Often the 4.0 version of the model will be used

When using `imageanalysis:analyze` you specify which features are required

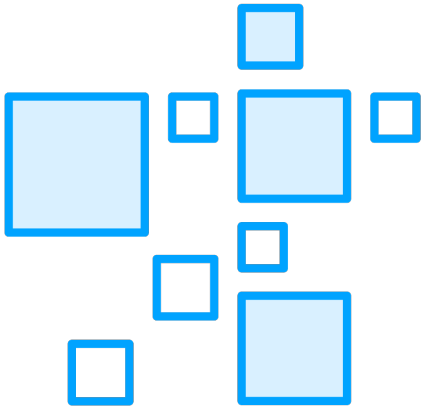
The SDKs abstract underlying REST API calls

Using Customized Vision

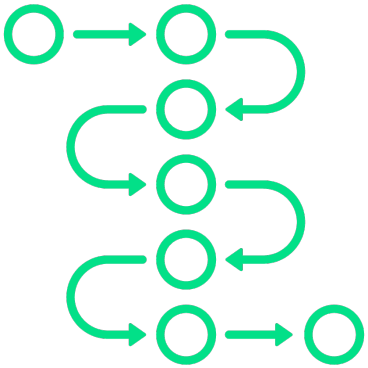


Enables customized analysis

Leverage the Image Analysis 4.0 model



High quality training data is critical



Training is an iterative process

Azure Video Analyzer

Videos have many types of analysis available

Select only the type and bundle of analysis required to optimize cost

The portal provides an intuitive environment for performing the analysis and viewing insights

Widgets enable integration with your own app or site

The API enables automation of the operation tasks

Congratulations and Thank You!

Exam Tips

John Savill
Chief Architect

@ntfaqguy | onboardtoazure.com

Top Tips

- Hands-on with everything!
- Understand which type of resource to use and version
- Be able to differentiate the capabilities
- Sequence of steps for customized vision
- Cost considerations for training and Video Indexer

Congratulations and Good Luck!
