Product mention 5x	17-Feb	Customer Experience	$ 635	$ 2,208	55,000

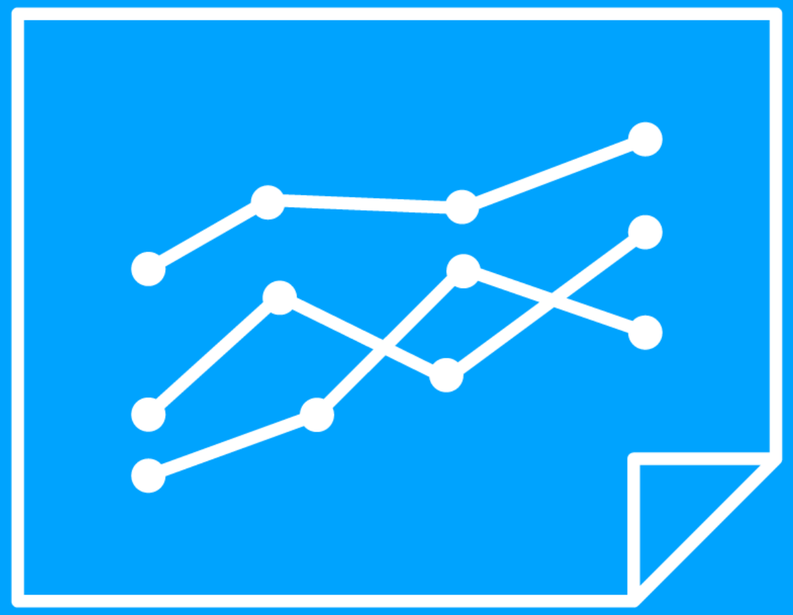
Copilot in Excel Limitations

Copilot works best with Excel tables of up to two million cells

Some functions such as highlight, sort, and filter do not have a limit on the amount of data

- It can take a long time for the task to complete

Copilot in Microsoft Excel in Action



Identify Insights

Let Copilot help analyze and visualize your data

Prompt Examples

Identify the lowest price for each product in 2022

Create a chart showcasing the cost of budget per revenue of all the campaigns

Which campaigns have a higher budget than revenue?

Excel in Copilot Tips

Copilot does a good job of identifying columns you talk about

- You can reference them between ‘single quotes’

The more specific you are around your request, the better answers you will get

- Ask for a specific type of chart that you want!

Demo

Identify Insights with Copilot in Excel

Highlight, Sort, and Filter Your Data

With Copilot for Microsoft 365, it's easy to highlight, sort, and filter your tables to quickly call attention to what matters to you.

Prompt Examples

Bold the top 10 values in the Sales column

Sort engagement rate from smallest to largest

Filter to items that are due next week

Demo

Highlight, sort, and filter your data with Copilot in Excel

Generate Formula Columns

Not sure how to write a formula for a new column? Copilot for Microsoft 365 can quickly add new columns with formulas based on your data.

Prompt Examples

Calculate total cost per product in a new column

Add a column that calculates the total profit for each marketing campaign in 2024

Add a column that calculates the number of days after the product launch event

Demo

Generate formula columns with Copilot

Module Conclusion

Requirements and how to access Copilot in Excel

- Content must be in SharePoint or OneDrive
- Data must be formatted as an Excel table

Using Copilot in Excel to

- Identify Insights
- Highlight, sort, and filter your data
- Generate formula columns
