AI Ethics Guidelines & Principles

Global landscape:

- Organization for Economic Co-operation and Development (OECD)
- United States (US)
- European Union (EU)
- Big Tech

Examples per region/industry

Reference material

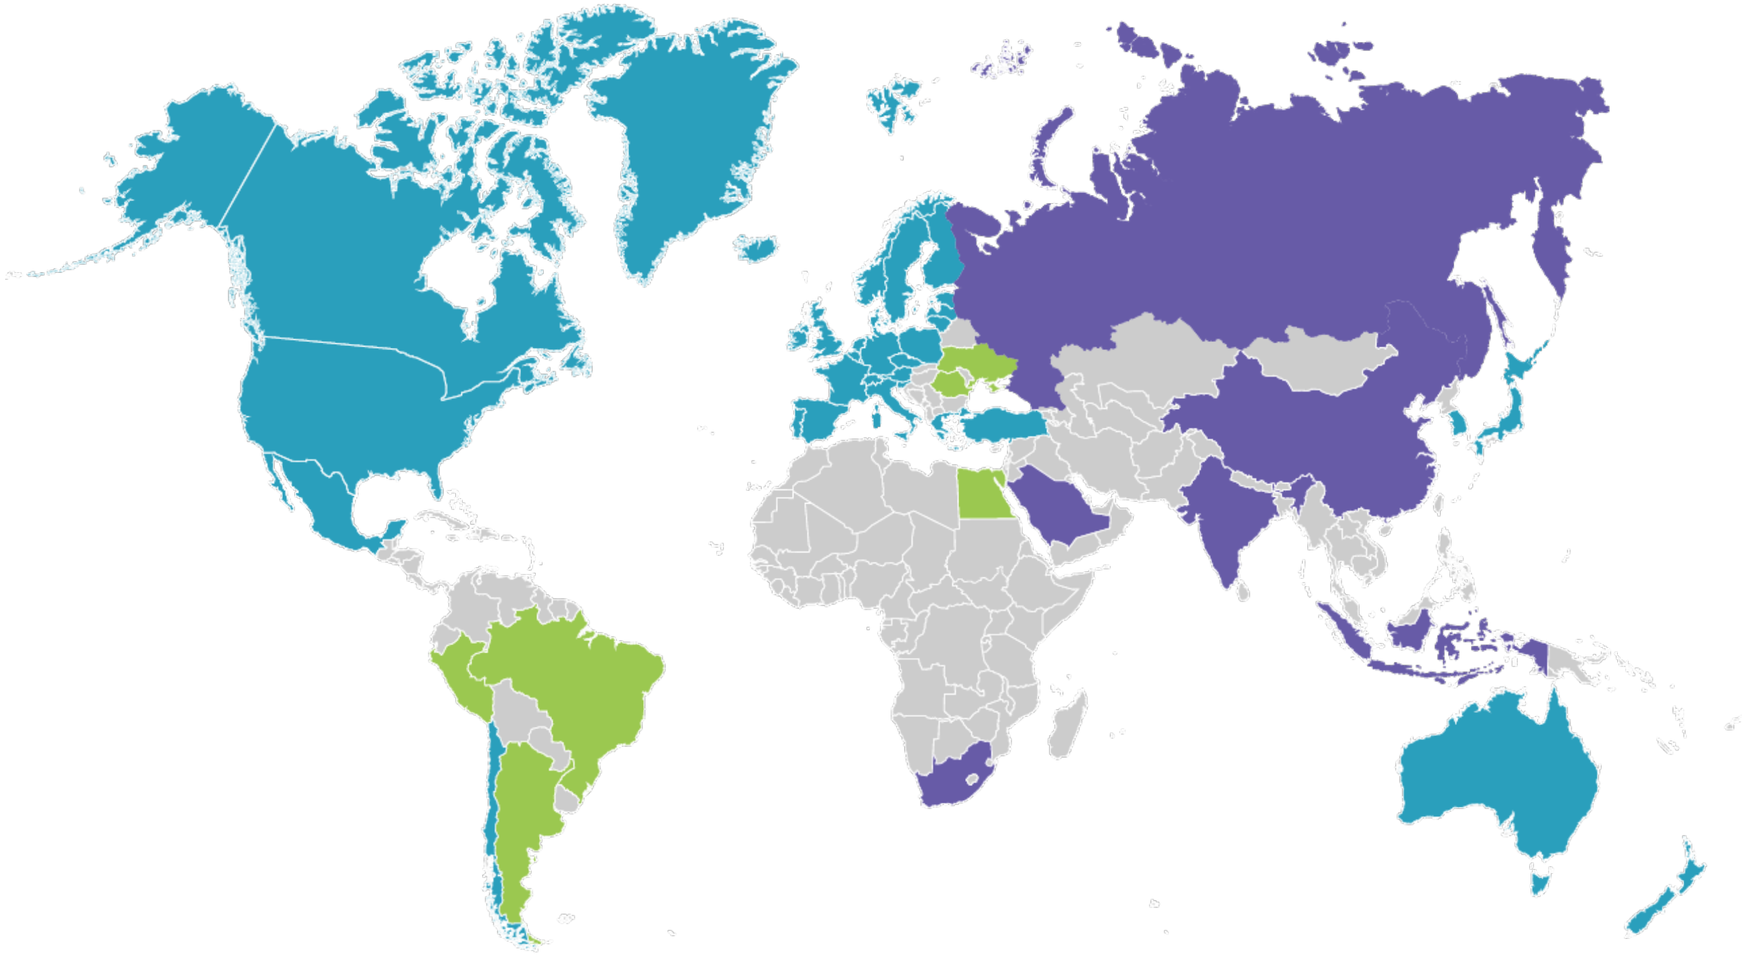
Global Landscape: OECD

Recommendation of the Council on Artificial Intelligence:

https://legalinstruments.oecd.org/en/instruments/OECD-LEGAL-0449

Countries and Tools overview: https://oecd.ai/en/countries-and-tools

Governments Committed to the AI Principles



OECD Members

Adherents

G20 principles, based on OECD

*Singapore is adherent

Value-Based Principles

Inclusive growth, sustainable development, and wellbeing

Human-centered values and fairness

Transparency and explainability

Robustness, security, and safety

Accountability

Source: https://oecd.ai/en/ai-principles

Legislation on Government Use of Recruitment and Selection Algorithms

Human-centered values and fairness:

Did the government create mechanisms and safeguards to ensure non-discrimination and equality?

Applying OECD Principles

Global Landscape: United States

National Artificial Intelligence Initiative (NAII)

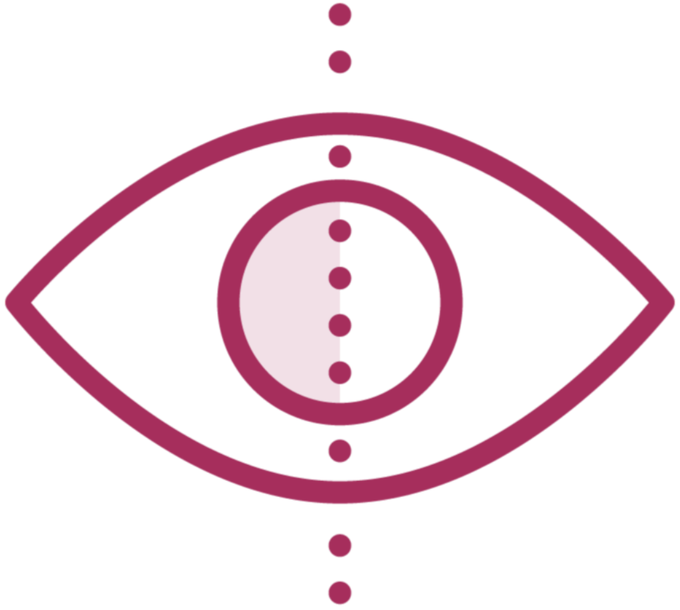
Federal Trade Commission (FTC): Business Guidance on AI and Algorithms

- Be transparent
- Explain your decision to the consumer
- Ensure that your decisions are fair
- Data and models must be robust and empirically sound
- Accountability for compliance, ethics, fairness, and nondiscrimination

ftc.gov/news-events/blogs/business-blog/2020/04/using-artificial-intelligence-algorithms

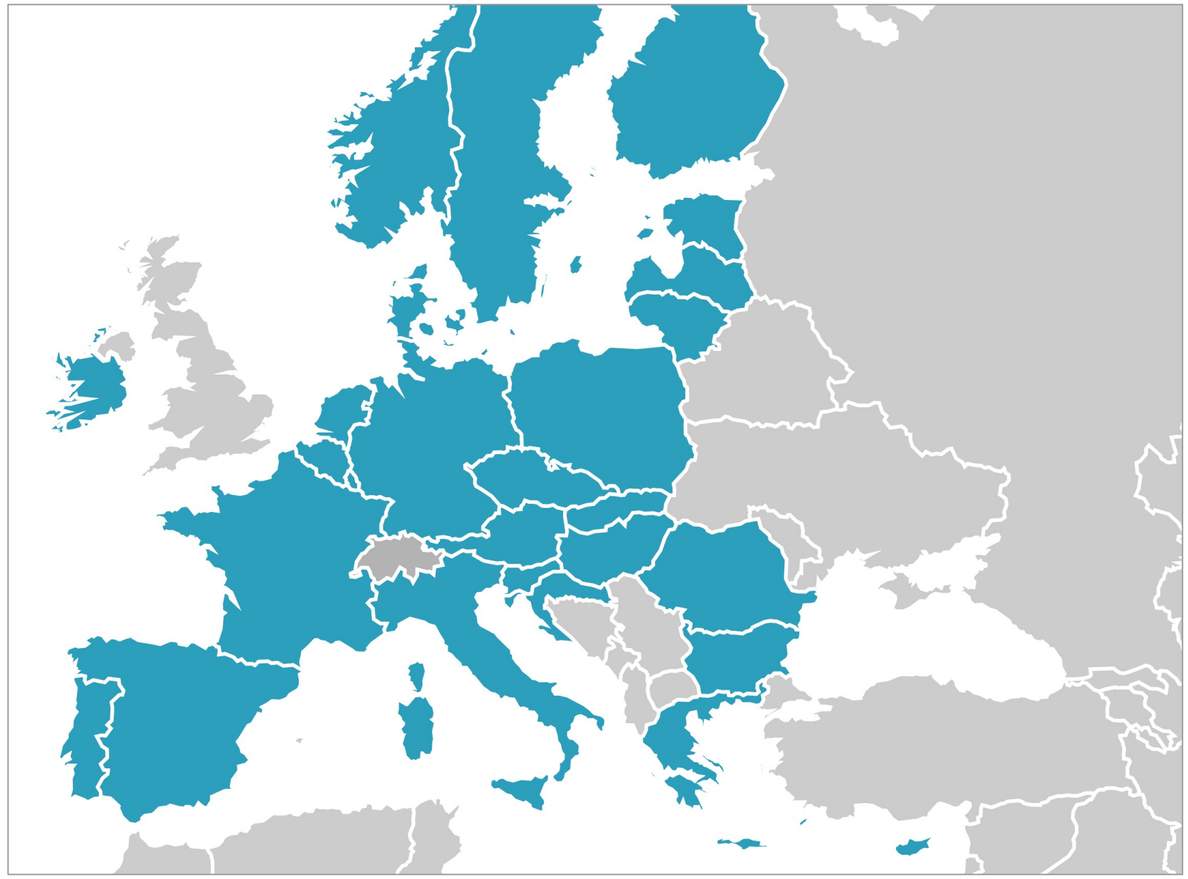
Example: Facial Recognition



Use of facial recognition to tag users' photos on an online platform

- Transparency: provide meaningful information to foster a general understanding of the AI system
- Accountability: maintain documents showing key decisions throughout the systems lifecycle / allow auditing

Global Landscape: European Union



High-Level Expert Group on Artificial Intelligence (AI HLEG)

Ethics Guidelines for Trustworthy AI
Fundamental Rights

Human Dignity: Respect intrinsic value, physical, and mental integrity of human beings

Individual Freedom: Freedom to make life decisions

Respect for Democracy, Justice, Rule of Law: Protect democratic processes, plurality of values

Equality, non-discrimination: Prevent unfairly biased outputs

Citizens' Rights: Right to vote, good administration...

https://op.europa.eu/en/publication-detail/-/publication/d3988569-0434-11ea-8c1f-01aa75ed71a1

Ethics Guidelines for Trustworthy AI
Ethical Principles

Respect for Human Autonomy

Prevention of Harm

Fairness

Explainability

Example:
Anti-money Laundering

A Payment Service Provider (PSP) uses machine learning algorithms to identify fraudulent transactions, merchants, and shoppers.

- Prevention of Harm: don't exclude companies and individuals from financial services without a thorough decision-making process.

- Explainability: communicate clearly which factors might be a reason for the algorithm to flag a transaction or individual.
