The Potential of AI

Trust in Development and Use of AI

Trust is essential for realizing social and economic benefits of AI

Ethical principles and guidelines are instruments to ensure trust in AI

Ensuring Trust in AI

Ethical Guidelines Everywhere

Governments, companies, research institutions

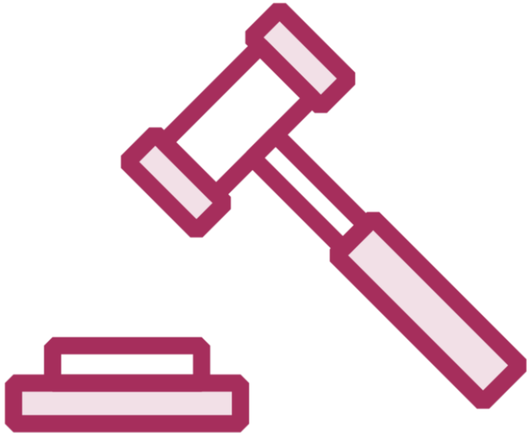
Notably in United States, Japan and Europe

Overview:

'Artificial Intelligence: the global landscape of ethics guidelines',
https://arxiv.org/pdf/1906.11668.pdf

European Ethics Guidelines

Components of Trustworthy AI



AI systems should be lawful

AI systems should be ethical

AI systems should be robust

Complying with Existing Legal Rules

Lawful AI

Existing legal rules

Freedom of speech, non-discrimination, personal data, product liability.

AI specific legislation

See Legal Framework United States & European Union

Ethical AI

Ethical reflection to protect individuals and groups

Ethical principles

Fundamental rights

Robust AI

Safeguards to prevent unintentional harm

Assessment methods (Module 4)

Complying with Existing Legal Rules
