# Implementing Your Strategy

**Jamie Maguire**

Software Architect | Developer | Microsoft MVP (AI)

@jamie_maguire1 | www.jamiemaguire.net

# Overview

- Starting with a pilot
- Iterating and improving
- Measuring success and impact

# Starting with a Pilot

# Why Start with a Pilot

Low risk

Deeper understanding

Cost effective

Increased buy-in

Further validation

Path to scalability

# Selecting a Suitable Prototype

Quick win

High impact

Limited functionality

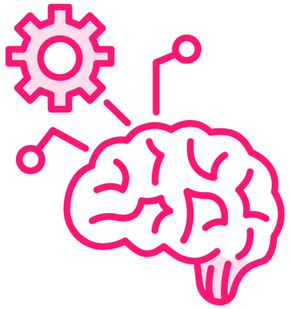
Limited datasets

Build trust and confidence

# Selecting Appropriate Technology for Your Prototype

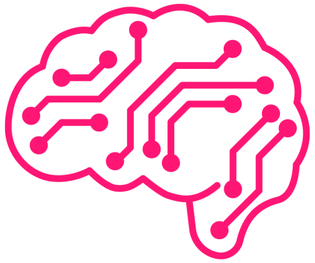
## Custom ML Models

Bayesian classifier, KNN etc.



## AI SDK

ML.NET

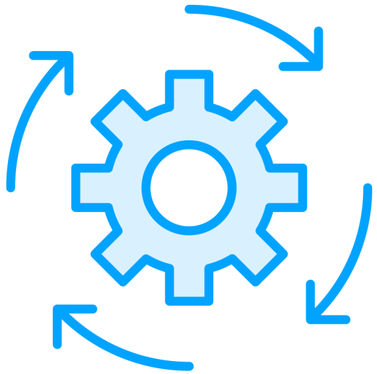


## Cloud Services

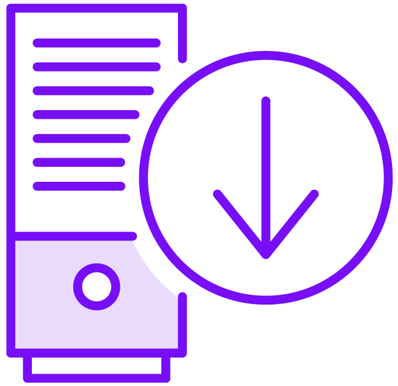
Azure Cognitive Services

# Identifying and Gathering Data for Your Prototype

Relevant and accurate



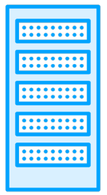
Pre-processing



Ingest

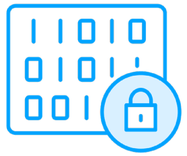
Validate

# Building Your Prototype



Infrastructure

DevOps



Data professionals

Software development

# Example Prototype: Bayesian Classifier

Classify the sentiment of text data

Identify and gather examples of positive and negative sentiment

Pre-process and cleanse

Remove stop words and noise words

# Example Prototype: Bayesian Classifier

Train the classifier using cleansed dataset

Evaluate accuracy

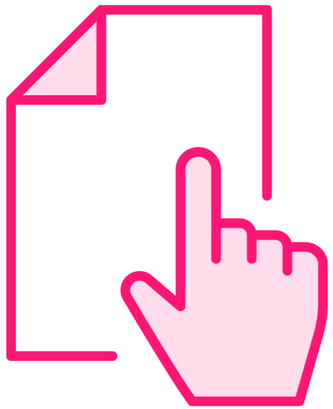
Deploy and test classifier using subset of live data

Further evaluation against business and AI strategy objectives

# Communication

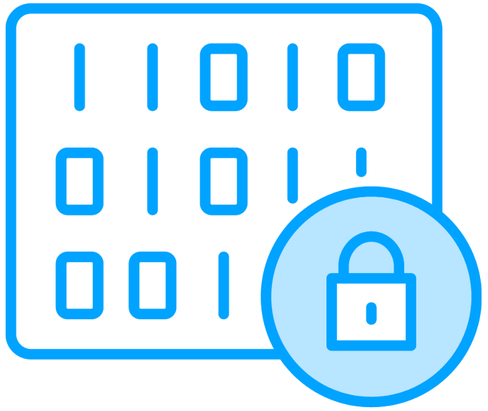
Explain the benefits

Provide evidence



Educate stakeholders and employees

# Scaling Your Prototype



**Additional Datasets**
Increased ROI

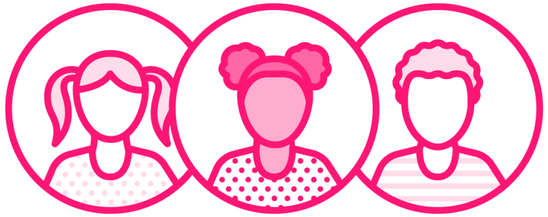
**Additional Use Cases**
Increased footprint

# Capture feedback

# Iterating and Improving

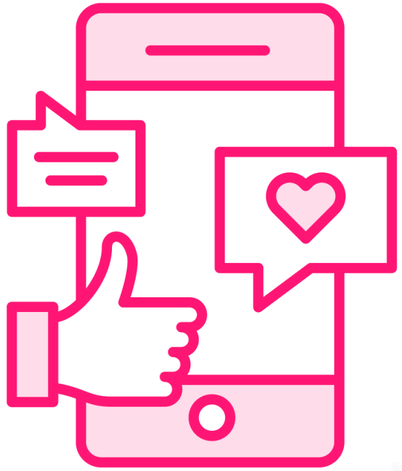
# Capturing Feedback

Online surveys



User group

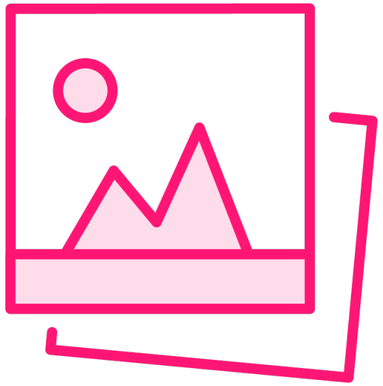
Real-time



Social media

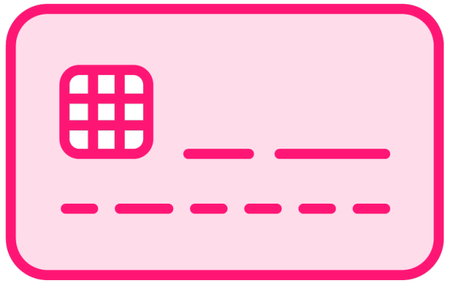
# Analyze Data

Key metrics



Google Analytics

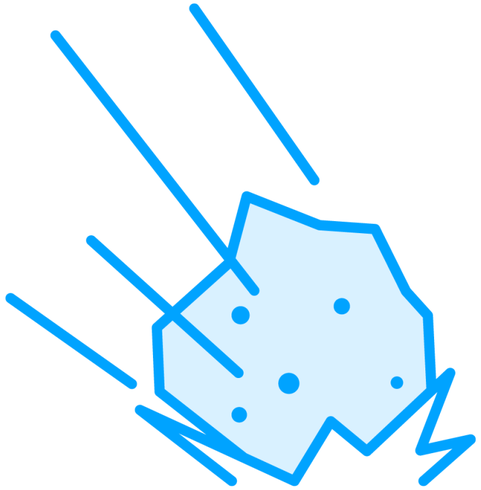
Application logs



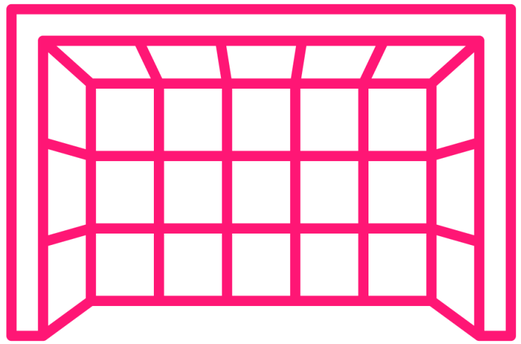
Correlations and patterns

# Use data to take actions

# Prioritize Improvements

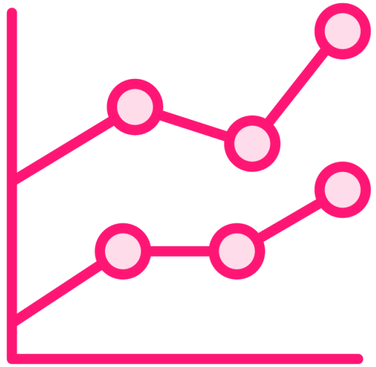


Evaluate impact



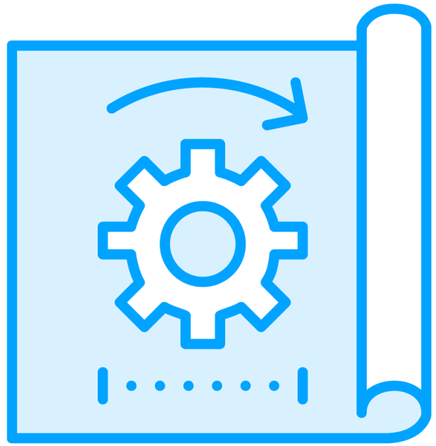
Alignment with goals

Feasibility

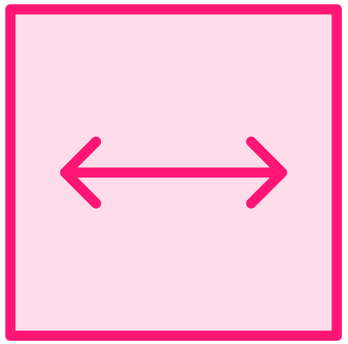


Resource availability

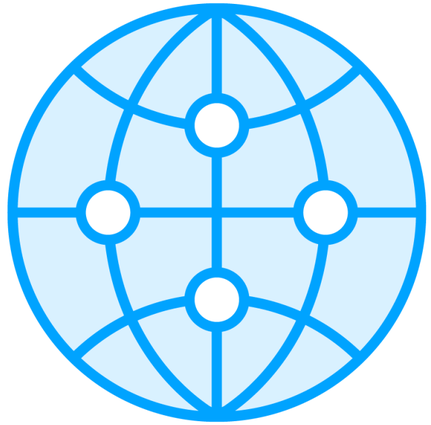
# Planning for Build and Deploy



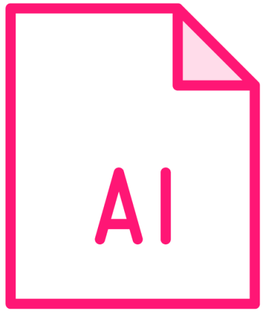
Plan and Test



Dependencies



Environmental



Existing models

# Identify Breaking Changes

Partner and vendor integrations

Changing API payloads

SDK support

# Plan accordingly and consider rollback strategies

# Deploy and Monitor

# Iterative Development

Capture and analyze feedback

Prioritize improvements

Build, test, deploy, and iterate

# Continually Evaluate

# Measuring Success and Impact of AI

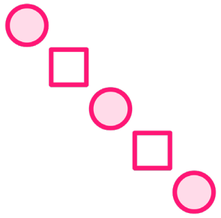
# Are Business Outcomes Being Met?

Clear ROI of AI initiatives?

User adoption?

Delivering desired results?

# Example Metrics



Efficiency improvements

Cost reductions

Customer satisfaction

# Example Metrics

Conversion rates

Customer retention

Security and privacy

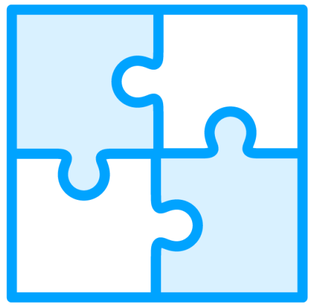
# Audit and Monitor

Regular audits

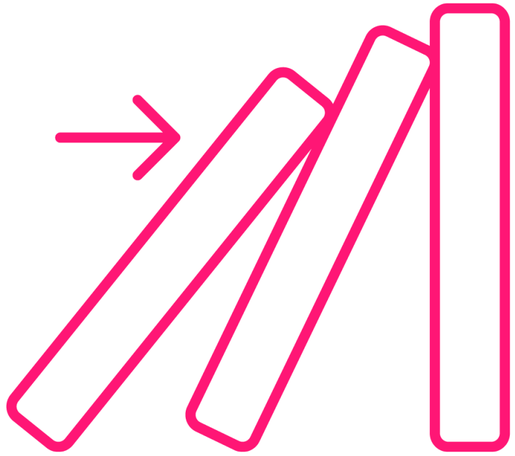
Perform impact analysis

Stakeholder feedback

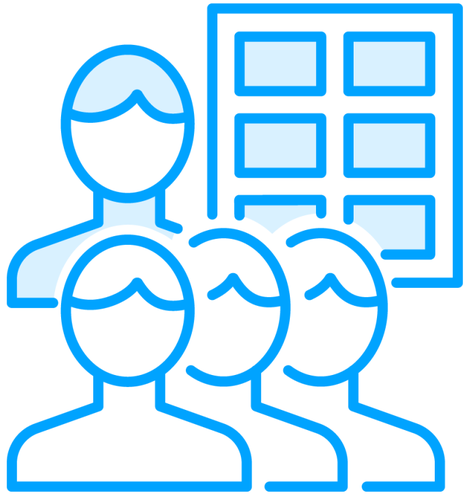
# Informed and Improved Future Development



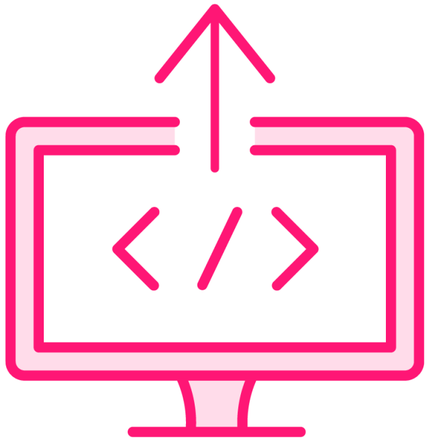
Systematic



Effective



Adapting to business needs



Quicker path version 1.0

# Summary

- Starting with a pilot
- Iterating and improving
- Measuring success and impact

Up Next:

# Summary and Wrapping up
